设备介绍

INTRODUCTION OF EQUIPMENT

- 适用于油炸花生、青豆、蚕豆等坚果类颗粒状产品。
- 油幕式油炸为非浸入式油炸，油炸食物通过多道油幕淋热油对其进行加热。油的使用量大大降低。
- 油炸过程中实现不间断过滤，避免了传统油炸过程中产生的残渣留在产品表面现象，提高产品的合格率，高达百分之九十九，产品产量大大提高。
- 在炸制过程中，引用动态滤油系统，随时清除废渣，保持炸油新鲜，全面解决了油渣残留致使油劣化的问题。
- Mainly used for fried peanuts, green beans, broad beans and other nut granular products.
- Oil curtain frying is non-immersion frying. Fried food is heated by pouring hot oil through multiple oil curtains. Oil usage is greatly reduced.
- Uninterrupted filtration is achieved during the frying process, which avoids the residue generated during the traditional frying process remaining on the surface of the product, improves the product qualification rate, up to 99%, and greatly increases product output.
- During the frying process, a dynamic oil filtering system is used to remove waste residue at any time and keep the frying oil fresh, which comprehensively solves the problem of oil deterioration caused by oil residue residue.

SKZK-800/1200/1300 VACUUM FRYING MACHINE SKZK-800/1200/1300 真空油炸机

设备概述

EQUIPMENT INTRODUCTION

- 真空油炸低温温度范围在80-100°C之间，可以有效减少高温对食品营养成分的破坏。
- 保色作用：采用真空油炸，油炸温度大大降低，而且油炸锅内的氧气浓度也大幅度降低。油炸食品不易褪色、变色、褐变，可以保持原料本身的颜色。
- 保香作用：采用真空油炸，原料在密封真空状态下被加热。原料中的呈味成份大多数为水溶性，在油脂中并不溶出，并且随着原料的脱水，这些呈味成份进一步得到浓缩。可以很好地保存原料本身具有的香味。
- 成品含油量更低、更健康。
- 真空油炸在食品工业中的适用范围非常广，可以用于加工水果蔬菜、坚果、水产品及畜禽肉类等多种产品。

The low temperature range of vacuum frying is between 80-100°C, which can effectively reduce the damage of high temperature to the nutritional content of food.
 Color preservation effect: Using vacuum frying, the frying temperature is greatly reduced, and the oxygen concentration in the fryer is also greatly reduced. Fried food is not easy to fade, change color or brown, and can maintain the color of the raw materials themselves.
 Flavor preservation effect: Using vacuum frying, the raw materials are heated in a sealed vacuum state. Most of the flavor components in the raw materials are water-soluble and do not dissolve in the oil. As the raw materials are dehydrated, these flavor components are further concentrated. It can well preserve the fragrance of the raw materials themselves.
 Lower oil content and healthier finished products
 Vacuum frying has a very wide range of applications in the food industry and can be used to process a variety of products such as fruits, vegetables, nuts, aquatic products, livestock and poultry meat.

可用能源：电、电磁、蒸汽、天然气。

Available energy: electricity, electromagnetic, steam, natural gas.

真空油炸是油炸休闲食品的“绿色革命”。真空油炸技术将油炸和脱水作用有机地结合在一起，使产品处于负压状态下，其绝对压力低于大气压，在这种相对缺氧的情况下进行食品加工，可以减轻甚至避免氧化作用（如脂肪酸败、酶促褐变和其他氧化变质等）所带来的危害。

Vacuum frying is the "green revolution" in frying snack foods. The vacuum frying technology organically combines frying and dehydration, so that the product is under negative pressure, and its absolute pressure is lower than atmospheric pressure. Food processing in this relatively hypoxic condition can reduce or even avoid oxidation (Such as fatty acid failure, enzymatic browning, and other oxidative deterioration).
